

BioFloc™-The New Revolution of Flocculants

Applications Include:

- Hog Slurry Operations
 - Food Processing
 - Livestock Manure Farms
 - Aerated Septic Tanks
 - Municipal Wastewater
 - ATU's
 - Mining Operations
 - Oil/Gas Drilling Production Locations
 - Oil/Gas Holding Ponds
 - Landfill Drainage Pits
 - Ditches
 - Construction Sites
- Flocculates/Coagulates sediment
 - Breaks emulsified oils
 - Encapsulates heavy metals or entrained oil
 - Forms flocculated sludge that can be removed or digested
 - Biologicals digest and dissolve organic sludge that forms after flocculation
 - Digested process produces beneficials that improves water quality and provides nutrients for vegetation growth
 - Nutrient and oxygen rich water can be used for irrigation water
 - Reduces sodium levels
 - Controls ammonia and hydrogen sulfate gases
 - Lowers BOD/COD/FOG
 - Controls odors
 - Reduces surfactants/chemicals
